

Why we strive to communicate with the public, putting advocacy to work.

To protect Georgia's coast – including our waters, wildlife, beaches, forests, and marshlands – we believe it is vital to communicate with Georgians in building public awareness about coastal challenges and support for needed corrective actions. Our statements often cite authoritative, factual information that is rarely found in general media. Motivating and informing citizens is critical to empowering our democracy to improve the future. Accordingly, Center staff and board members work diligently in preparing these materials submitted to newspapers and online media outlets. We deem this work essential to the Center's mission.
